

MESSAGE FROM
THE PRESIDENT

Keeping in touch

Understanding the needs of our clients is a significant priority for the Ulrich team. To stay in touch on a regular basis and provide you with the opportunity to ask questions and explore important issues, I am pleased to bring you our new on-line version of *Ulrich Contact*.

Our goal is to bring you updates and information on a timely basis and also create a fast and flexible way for our clients to ask general questions that may not be addressed during day-to-day interaction with our team. By submitting your queries to service@ulrich.ca, you will enable us to review and address the subjects that are of importance to you and provide us with the opportunity to share answers anonymously if we believe they could help other users of Ulrich Metrology services.

By creating an interactive dialogue, we will further our efforts to provide information on a wider range of quality and operational questions. We look forward to hearing from you!

Ingrid Ulrich, CA, MBA
President, Ulrich Metrology Inc.

NEW CAPABILITIES

Offering the right services, when and where they are needed, requires an ongoing commitment to investment and innovation. We are pleased to announce some exciting new developments in our Calibration Laboratories.

Low Pressure Calibration

Ulrich now offers traceable calibration of absolute pressure gauges through a service that is available at our laboratories, or on-site at your location. Our new **MKS PVS6D** instrument offers a range of 0.001 mmHg (TORR) to 1000 mmHg (TORR) absolute, with an accuracy of 0.08%. Contact us if you require calibration of the following types of gauges:

- capacitance manometers;
- thermocouple gauges;
- pirani gauges;
- mechanical dial gauges.

High Power DC Calibration

Our Lab is now equipped with a new **NHR 4700 DC Load**, which has a range of 6 kWatts, 0-120 Volts, and 0-1200 Amps. Contact us if you require:

- calibration of high power DC power supplies;
- testing of batteries;
- testing telecom rectifiers;
- testing of fuel cells.
